prak10-07

The image shows a Visual Studio Code editor window with a C++ file named `prak10-07.cpp`. The code defines a `main` function that initializes variables `vint`, `vdbl`, and `vstring`, then uses `stringstream` to format them into a string `result` and prints it. A Command Prompt window is open, showing the compilation and execution of the program, which outputs the formatted string.

```
#include <iostream>
#include <sstream>
using namespace std;

int main() {
    // Initialize data
    int vint = 100;
    double vdbl = 25.8976;
    string vstring = "abcdef";

    stringstream formattedOutput;
    formattedOutput << "vint=" << vint << ", vdbl=" << vdbl << ", vstring=" << vstring << "\n";
    string result = formattedOutput.str();
    cout << result << endl;

    return 0;
}
```

```
F:\>g++ prak10-07.cpp -o prak10-07.exe
F:\>prak10-07
vint=100, vdbl=25.8976, vstring="abcdef"
F:\>
```
